Subject: industrial plot 20B

Dear George

We are writing to you regarding the industrial plot no. 20B we talked about few days ago.

Our idea is to build very simple workshop made from two or three technical containers, the type of container which is already lined with insulation and contains wiring, windows and doors. We would like to also cover them with painted planks outside to make it look nice because we want to make this workshop permanent rather than short term but at the same time it would be still moveable.

The purpose of this workshop is to make our wood art, so what we need inside is only access to electricity. The tools that we use are mostly battery-operated, such as a grinder but we would like to have one table saw inside that needs an electric connection. To give you a better picture of what we do we can shortly describe the process of making our art, which is simply cutting wood, sanding it and gluing it to a plywood. One of the examples of it is the big welcome sign in Vik that we made so it is a very simple type of work. Therefore we completely do not need access to water. In case of any toilet issues we would like to use our toilet at home which is just nearby.

Regarding the duration of rent the longer the better. We hope it gives you more or less the idea of what we think. In case you need more explanation please let us know.

Best regards

Kasia and Kamil
